

HEALTHY CIRCULATION DEPENDS...

On a healthy endothelium, the inner lining of your blood vessels. A healthy endothelium is responsible for:

- Controlling your blood pressure and clotting ability
- Aiding in the formation of new blood vessels and tissue remodeling
- ▶ Playing a significant role in the body's immune system and inflammatory responses

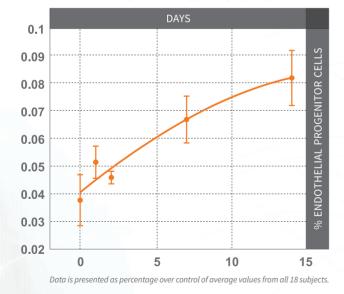

THE ENDOTHELIAL PROGENITOR CELL...

Is a type of stem cell that is able to mature into a healthy endothelial cell. **Stem-Kine stimulates your body to release EPCs by up to 100% during supplementation.***

Stem cells decline rapidly with age, particularly in people over 40. By taking Stem-Kine you are increasing your body's ability to heal itself quickly and effectively. Numerous studies demonstrate a direct, positive correlation between the number of circulating stem cells and health, wellness and regenerative capabilities.

STEM-KINE SUPPLEMENTATION AUGMENTS CIRCULATING ENDOTHELIAL PROGENITOR CELLS.¹

HOW DOES IT WORK?

Stem-Kine has been *scientifically proven in two human clinical trials* to increase the number of circulating stem cells in the body by up to 100%*

No other supplement can claim these results. Just as fertilizer stimulates a tree to bear more fruit, Stem-Kine nourishes your bone marrow to release more of its own stem cells into circulation and protects those cells from oxidative stress. It does so through a "secret ingredient" – a cell wall extract of *Lactobacillus fermentum* – developed exclusively for Stem-Kine.

Supplement Facts Serving Size 2 Capsules Servings per Container: 30		
Am	ount per serving	%DV
Vitamin D3	2000IU	500%
Proprietary blend: L. fermentum extract, Ellagic Acid 40% & Beta 1,3 glucan	1400mg	A

Other ingredients: Gelatin capsule, magnesium stearate. *Study participants were taking twice the daily dosage.
